

Occupational education and rehabilitation centre Linz

Holzbauer&Partner/Wien, 2012/13

The occupational education and rehabilitation centre (BBRZ) supports people after an accident or illness on their path back to professional life. After comprehensive modernization and renovation, this 12-story centre at Grillparzerstraße in Linz (Upper Austria) has been completed in 2013. The architectural firm Holzbauer&Partner was responsible for planning.

Metal ceilings have been installed in all areas of the BBRZ (office & classrooms, hallways). FURAL metal ceilings were able to satisfy the key requirements of an excellent room acoustic and a complete and simple possibility of revision. In addition, the decision against mineral fibres and for metal ceilings was made based on the best integration of built-ins.

Moreover, the BBRZ was received the **preliminary silver certificate awarded by the DGNB** (The German Sustainable Building Council). The educational centre values highly the balance of the relationship between environment and people.

Project data

Perforation:

Rg 2,5 - 16 %

Colour:

RAL 9010

Metal ceiling area:

10.000 m²

System:

Strip-grid, Clip-in system, Lay-in

Function:

Acoustics, accessibility
