

Asklepios Stadtklinik Bad Tölz

Bad Tölz, 2011

Friendly, quiet atmosphere and pleasant light combined with a first-class fire protection solution: Where, if not in a maternity unit, are these precisely the factors that create a comfortable environment? At the Asklepios Stadtklinik in Bad Tölz, this was achieved with the modernisation of the maternity and gynaecology wards with FP-Secure - a high-quality combination of FURAL fire protection ceilings with high-performance Philips LED lights.

Modernisation of the wards was commissioned within the scope of the Green Hospital programme of the Asklepios Clinics, whose aim is the sustainable and economic use of resources. FP-Secure meets all the requirements made of a modern ceiling: outstanding acoustics, fire protection, serviceability and sustainable, energy-saving LED lighting.
