Airport Cologne/Bonn – The landing point with Fural metal ceilings

With over 12.96 million passengers, Cologne Bonn Airport is one of the most important airports in Germany. More than 30 different airlines fly from here to a wide variety of destinations.

However, before passengers board the aircraft, they pass through the transfer aisle (T1 to T2), which is equipped with Fural metal ceilings.

Window tiles have been installed on an area of more than 800 m². The 1600 cassettes are perforated with Rg 2.5 - 16% and have a black fleece glued in- to provide the best possible shielding against noise from outside. A real highlight, however, is the built-in cooling system Aquatherm Black System, which reminds you of holidays already in the corridor...
