

## GOTECH Weissach

GOTECH, 2015

Precisely manufactured floating ceilings adorn the new head office of GOTECH in Weissach. In the field of motor vehicle development, the company is a highly respected partner of leading automotive brands, and it focuses on purism and functionality in interior architecture. Concrete and glass dominate. Room acoustics and temperature levels are controlled by generously dimensioned cooled floating ceilings that have a decisive impact on the spatial effect. This provides employees with a modern, ideal working environment that motivates them to perform at their peak.

The pure white (RAL 9010) floating ceilings are designed with tile dimensions of 3000x1200mm and 2400x1200mm, and perforation Rg 2,5 - 16 %. The precise 45° edges, in particular, give the ceilings a very flat, floating impression.
