

Cleaning and maintenance instructions for powder coating

Cleaning and maintenance instructions

Fural-metal ceilings with powder coating are easy to clean, because of the smooth surface.

We recommend to clean the ceiling at regular intervals that comply with the degree of contamination.

The following cleaning methods are possible:

It is possible to clean the ceiling panels assembled on the ceiling, but it depends on the acquired version whether it is possible in the folded or the removed state.

- A) Dry cleaning:
 - wipe with a dry and soft cleaning cloth
 - with vacuum cleaner, using a soft brush attachment

- B) Wet cleaning:
 - with commercial, non-abrasive detergents thinned with water
-> the mixing ratio depends on the degree of contamination of the metal ceilings;
all commercial glass cleaner have proven their worth
 - use a specific detergents (on a self-volatilizing basis - e.g. diluted spirit)
for heavy and greasy pollution

For high contaminations, it is necessarily to consult a specialized company for consultation and execution.
