

Kantonsspital Graubünden, Chur

Staufer & Hasler Architekten AG, 2019

In November 2019, the Cantonal Hospital of the Grisons has relocated the pediatric and adolescent medicine to the new Children's Clinic M. This is a place with a feel-good factor and makes the stay more pleasant for patients and their relatives. The furnishings and design elements make the hospital feel more comfortable. But it also offers more space than before, as the patient rooms, examination rooms and material storage are ideally planned. This in turn makes the work of the nursing staff and doctors easier.

Fural fire protection ceilings EI 60 and SWING ceilings EI 0 were installed in the corridors. Both ceiling systems are acoustically effective and the color of the metal ceilings ideally matches the color concept of Children's Hospital M, contributing to a harmonious environment. In the event of inspection work, individual tiles of both ceiling systems can be flexibly folded down. This allows quick and easy access to the ceiling cavity and minimizes disruption to ongoing hospital operations.
