

Freiburg Unterlinden district

Freiburg, 2011

Freiburg's largest construction site becomes Freiburg's newest city centre district. The 9-storey, solitary office tower in the Unterlinden district was opened in April 2011. The 65-million euro project has therefore been completed after a construction period of several years.

Multi-part acoustic floating ceilings with Rd 1,8 - 21 % perforation equipped with cooling elements ensure a high-quality room atmosphere. Long-span lights are suspended between the frequently sectionalised floating ceilings to create an optimum working environment. Pillar incisions with shadow joints and large-format angled elements made high demands on technique and production, which in some cases were solved using the in-house laser welding unit.

Project data

Perforation:

Rd 1,8 - 21 %

Colour:

RAL 9010

Metal ceiling area:

2,200 m²

System:

[Floating ceiling](#)

Function:

Acoustics, cooling and heating
