## **Hochrum Private Clinic**

The Private clinic Hochrum, operated by *Sanatorium der Kreuzschwestern GmbH*, is Tirol's most modern private hospital, located above the rooftops of Innsbruck. Physicians from 19 medical disciplines treat patients here.

The clinic offers a wide range of treatments and specialises in rehabilitation, pain therapy, and orthopaedic care. It also provides therapies for neurological disorders and psychosomatic conditions.

The building was designed to promote a calm and healing atmosphere. Its architecture and interiors are bright and open, creating a sense of comfort and relaxation for patients.

## The Perfect Metal Ceiling for Every Area

During the realisation of the new building, the ideal acoustic ceiling with a clip-in system was installed in three key areas, tailored to each space's specific requirements as planned by the Innsbruck-based architectural office AR18:

- Swimming Pool & Therapy Pool
   Here, the ceiling elements were not installed in a flat plane. Instead, the panels were arranged with a slight upward and downward tilt, creating optical "folds" that, at the architects' request, produce a wave-like effect above the pool.
- Therapy Area
   A standard ceiling (module 625 x 625, surface colour RAL 9010 Pure White, perforation type 2515 with black acoustic fleece) was selected to achieve maximum room height combined with optimal acoustics.
- Operating Theatres & Recovery Room
   Due to hygiene requirements, an unperforated cassette ceiling was installed (module 625 x 625 KQK, colour RAL 9010). The SLE cassettes were supplied with integrated LED lighting and printed surfaces. The ceiling motifs are well-received by patients, making the recovery area feel less sterile.

## **Project Data**

Perforation: Rg 2.5 – 16% perforated with black fleece

Colour: RAL 9010
System: Clip-in system
Metal ceiling area: 500 m²

Function: Acoustics, Design / no heating or cooling ceilings in

pool area

Photography: stauss processform gmbh
