

## Dermatology Department, Essen University Hospital

Bergstermann + Dutczak/Dortmund, 2009

The new dermatology clinic at the University Hospital in Essen was designed by the architects Bergstermann + Dutczak as a modular structure. On the one hand, this type of construction offers flexibility, e.g. for extensions, while, on the other hand, the high degree of prefabrication brings important cost benefits.

In order to comply with fire safety requirements in the corridors, they were equipped with FURAL fire protection ceilings. Thanks to its convenient swing-out mechanism, the F30 swing-and-slide system employed ensures simple serviceability in the service phase. A high level of acoustic comfort is ensured in the corridors by the Rg 2,5 - 16 % perforation.

### Project data

Perforation:

Rg 2,5 - 16 %

Colour:

RAL 9010

Metal ceiling area:

1,000 m<sup>2</sup>

System:

[Swing-and-slide](#), F30

Function:

Acoustics, fire protection, serviceability
